cut technologies
Why should you work with sitola?

The Company

sitola cut technologies is a German company with nearly 20 years experience in developing, producing and distributing high quality products and service for existing foam cutting machines, such as Albrecht Baumer or Fecken-Kirfel.

We produce precision blades and wires for CNC cutting, splitting and trimming machines as well as cutting wires for special foam cutting applications. Also, we provide a large variety of spare parts, like grinding stones, diamond tips, pulley wheels, tension wires etc.

As the controls on older machines become obsolete and can no longer be supported by the OEM, we retrofit these machines with new electronic control systems and new motors in order to give your equipment a second life, at a fraction of the cost for a new machine.

We also sell second hand foam cutting machines which we have upgraded and refurbished.
Thanks to our many years of experience and to the continuing innovations as well as to the strong customer orientation you receive customised products directly from the manufacturer to meet your special requirements.

Because of the fact that we have been working in accordance with the international standards of an effective quality management for a long time, well-known and renowned companies from all over the world have been relying on the excellent quality by sitola for years.

Over the years we have been developing our commitment at home as well as abroad so that the export share amounts to 85 percent of the total turnover.

This is not least due to our strategically situated international sales offices which attend to our customers.
We produce cutting tools and all kind of machine parts. All products are made of high-quality materials. After all, our customers expect an excellent quality and a first class product performance. Some of the industries we supply are the industry of foam manufacturers, upholstery manufacturers, mattresses manufacturers, automotive suppliers, packaging producers, household products, technical industrial products or insulation material processing.
CNC contour cutting band knives

Our knife cuts the perfect contour

You profit from the absolutely precise band knives for your CNC contour cutting machine. That is thanks to digitised optical production control. Due to the innovative further development of our products and manufacturing machines you always receive the suitable design for your specific application. The CNC contour knives are available smooth and ground with two heels and also toothed in oscillating or circulating design.

Advantages

- oscillating or endless
- toothed or flat with 2 heels
- HQ steel grades for maximum precision
- special welding process
- optical production control for perfect grinding
- production process for each blade is fully traceable

Dimensions

- 3,0 x 0,45 mm
- 3,0 x 0,6 mm
- 3,6 x 0,6 mm
- 3,8 x 0,7 mm
- 4,5 x 0,8 mm
- (...)
Horizontal cutting band knives

Best cutting results with sitola HQ band knives

For foam cutting machines of all standard manufacturers, you get ready-to-use ground circulating band knives in the dimensions of 30 x 0.45 mm to 100 x 1.2 mm. The design of the heels as well as the determination of the steel composition can be customised. A special surface treatment of the splitting band knife guarantees the ideal application in the machine. And also a longer lifetime of the band knife compared to conventional products. In addition to that you achieve a higher dimension accuracy of the cut products.

**Type Standard**
- standard steel grade
- pre-ground ready-to-use
- surface grinded
- special heel length on request
- short delivery times
- suitable for all kind of horizontal foam cutting machines

**Type HQ**
- harder steel grade
- pre-ground ready-to-use
- surface grinded
- special welding process
- knife back rectified for 5/100 mm tolerance
- production process for each blade is fully traceable
- special edge protection

**Dimensions**
- 30 x 0.45 mm
- 40 x 0.45 mm
- 50 x 0.50 mm
- 60 x 0.60 mm
- 60 x 1.00 mm
- 80 x 0.60 mm
- 80 x 1.00 mm
- 85 x 1.00 mm
- 100 x 1.20 mm
- (...)
We hold a large range of band knives ready for you

For nearly all kind of cutting machines we have available a large number of band knives that we can adapt to your needs. Among these are different teeth available that you need to cut for different materials like PU flexible foam, PU rigid foam, PU rebonded foam, extruded PS, phenolic resins, calcium silicates, mineral wool and foamglas.

Dimensions

- 8 x 0,45 mm
- 10 x 0,45 mm
- 15 x 0,45 mm
- 20 x 0,45 mm
- 20 x 0,60 mm
- 25 x 0,45 mm
- 25 x 0,60 mm
- (...)
Cutting wires

Special wires for all kind of materials

We manufacture customised cutting wires for your individual applications. That is due to the use of different primary materials like carbon and tungsten and a special winding technology of the production machine. The cutting wires are used among others for processing the following materials: PU flexible foam, PU rigid foam, PU rebonded foam, extruded PS, phenolic resins, calcium silicates, mineral wool and foamglas.
Grinding tools

The best cut with a sharp band knife

Each type of cutting machine requires the right tool to keep the blade sharp and thus to achieve the best cutting results. sitola offers you a wide range of grinding disks and cup grinding stones that are selected to best fit to our blade steels. As a result you achieve best cutting results and a long lifetime of the band knives.
Running wheels

Long lifetime and ready-to rework

sitola holds a large range of running wheels available for your machine. Among those are wheels for vertical cutting, horizontal cutting and CNC contour cutting machines. Each wheel has been designed to fit best into your foam cutting machine. You may profit twice with the sitola running wheels: they are made of materials that extend their lifetime. At the same moment it allows us to rework your old ones with new rubber coatings so that you don’t need to purchase new wheels.

spare parts and equipment

learn more at [sitola.com](http://sitola.com)
We know CNC contour cutting requires highest precision and best quality on all mechanical parts to make the perfect cut. Therefore we have developed and distribute the best spare parts for knife turning units of your oscillating or circulating CNC contour cutting machines.

Knife turning

Highest precision spare parts

- Knife guide for center support
- Cover guide for center support
- Cover guide for center support
- Knife turning unit
- Knife turning unit
- Push rod
- Anti twist device
- Clamp cover for push rod
- Tension wire
- Deflection roller tension wire
- Connecting rod (dog bone)
- Convoluted rubber gaiter
- Deflection roller incl. bearing
- Deflection roller with slot
- Precision water spirit level
Controller, motors and inverters

Exchange spare parts for your foam cutting machines

You surely know the problem: again a motor fails and there is no replacement for it or worse not even the OEM has the part. sitola offers electrical spare parts for your foam cutting machines that are sometimes not even provided by the original machine manufacturers. You may get your machine running again with new substitutes or repaired devices.

- servo motor
- AC gear motor
- controller (old version) in exchange
- joystick (old version) in exchange
- servo inverter
- servo inverter
- controller
- panel
- dust exhausting unit

learn more at sitola.com
All kind of mechanical spare parts quickly available

At sitola we continuously try to extend our range of mechanical spare parts. Thus we have learned to stock a wide range of different spare parts for your foam cutting machines. Since most of them are available in our stock you may receive them by overnight express in case of machine stops or maintenance issues.
What is Retrofit?

Retrofit is the replacement of mechanical and electrical components and the modernisation of the control system of your foam cutting machine.

Since older technology tends to wear out and is not available any more Retrofit is the perfect way for older machines to reach the state-of-the-art without having to be completely replaced.
Machine upgrades

Cost savings

• A new control system is the cost-effective alternative to purchasing a new cutting machine or even Retrofits offered by other suppliers.
• Short retrofitting time.
• If necessary, the old motor is simply replaced with the new one. There is no need to make any adaptations on-site, which significantly reduces the conversion time.
• User-friendly control system interface.
• An optionally integrated modem enables remote diagnoses and software updates worldwide. This drastically reduces service costs.

Vendor independence

• The conversion has multivendor-capability and can be implemented for all cutting machines from various manufacturers.
• The sitola CNC-control reads machine code of various providers. That means you can continue using your CAD programming software.

Reliability

• Fast provision of replacement parts overnight due to own stockkeeping.
• The newest generation of hardware components is independent and can be easily exchanged. If individual assemblies are no longer available after a longer period of time, it is possible to switch to other systems without any major difficulty.
• You may choose between a complete upgrade of the machine and partial upgrades of defective components.
• Existing safety equipment can be integrated into our control system.
CNC contour cutting machines

Give your machine a second life!

Our CNC control system for CNC contour cutting machines is the cost-effective alternative to purchasing a new cutting machine. It can be universally integrated into machines from a wide range of manufacturers. All cutting programs can be read and processed directly using our control system. The existing CAD programming system can thus continue to be used. We use technology of the latest generation. We have our own stock of the components and motors. This prevents long waiting times in the event of a fault.
Advantages

- A new control system is the cost-effective alternative to purchasing a new cutting machine or even Retrofits offered by other suppliers.
- You are manufacturer independent.
- You can benefit from a guaranteed and economic spare parts supply.
- Due to the integration of various machine codes you can continue using your existing CAD programming software.
- Service costs are cut due to possible remote access maintenance.
- You may choose between a complete upgrade of the machine and partial upgrades of defective components.
- An easy-to-use and intuitive user interface ensures straightforward operation.

CNC contour cutting machines

Do you want more?

Retrofitting your foam cutting machine does not only mean a simple exchange of inverters and the PLC. If necessary, sitola also offers an exchange of the motors, cables and other critical mechanical spare parts of your machine in order to get it running properly again.

- Motor table drive (old version)
- Motor height adjustment (old version)
- Motor knife turning unit (old version)
- Motor knife turning unit (old version)
- Knife turning unit (old version)
- Exchange servomotor table drive
- Exchange servomotor height adjustment
- Exchange servomotor knife turning unit
- Exchange servomotor knife turning unit
- New sitola knife turning unit

exchange servomotor rollers of holding down device

exchange of AC motor center support
Vertical cutting machines

Give your machine a second life!

Our control system for vertical cutting machines is the cost-effective alternative to purchasing a new cutting machine. It can be universally integrated into machines from a wide range of manufacturers. It does not matter if your machine operates AC, DC or newer servomotors. We use technology of the latest generation. Our own stock of the components and motors used also prevents long waiting times in the event of a fault. In addition, we offer complete conversion sets for vertical cutting machines.
Advantages

- A new control system is the cost-effective alternative to purchasing a new cutting machine or even Retrofits offered by other suppliers.
- You are manufacturer independent.
- You can benefit from a guaranteed and economic spare parts supply.
- Service costs are cut due to possible remote access maintenance.
- You may choose between a complete upgrade of the machine and partial upgrades of defective components.
- An easy-to-use and intuitive user interface ensures straightforward operation.
- We make upgrades for „old“ AC or DC motors as well as newer servomotors.
Horizontal cutting machines

Give your machine a second life!

Our control system for horizontal cutting machines is the cost-effective alternative to purchasing a new cutting machine. It can be universally integrated into machines from a wide range of manufacturers. It does not matter if your machine operates AC, DC or newer servomotors. We use technology of the latest generation. Our own stock of the components and motors used also prevents long waiting times in the event of a fault.
Advantages

- An easy-to-use and intuitive user interface ensures straightforward operation.
- We make upgrades for „old“ AC or DC motors as well as newer servomotors.
Service and maintenance

Service world-wide

We are making a skilled service team available for our customers. All of our technicians have been working on foam cutting machines for many years. Thus we know all challenges or issues that may occur and can help you to maintain or repair your cutting machines in the best way.
Advantages

- We repair and maintain your foam cutting machines on site.
- Personal consulting by telephone for problems which may arise is provided.
- You take advantage of a fast service that is provided world-wide.
- In case you want service at a time of your choice we offer service contracts that ensure the availability of our technicians.
Machine relocation

Service world-wide

We are making a skilled service team available for our customers. All of our technicians have been working on foam cutting machines for many years. We therefore relocate or move your foam cutting machines wherever you want. Thus it does not matter if you just want to relocate a single machine or if you plan to build up an entirely new plant.
Advantages

- Due to the great experience of our technicians we are ready to move or relocate nearly each type of foam cutting machine.
- We move or relocate your foam cutting machine or even the whole machinery.
- We also work in larger projects as the installation of entire plants or factories.
- You can take advantage of our fast service that is provided world-wide.
Save on used foam cutting machines

You, too, can benefit from re-using a second-hand foam cutting machine.

The services we offer include purchasing and selling as well as professional servicing for mature cutting machines in the fields of vertical cutting, horizontal cutting and CNC contour cutting.
Used foam cutting machines

Save money with used foam cutting machines!

Our used foam cutting machines are the cost-effective alternative to purchasing a new cutting machine. You benefit from high quality machines „Made in Germany“ that have been completely checked and tested. Most of the used foam cutting machines are also completely rebuilt. That means they have been equipped with a completely new machine control, new motors and new mechanical spare parts. They even look like a new machine. And not least it ensures the availability of any spare parts for a long time to go.
Advantages

- A used machine is the cost-effective alternative to purchasing a new foam cutting machine.
- All used machines are high quality foam cutting machines „Made in Germany“.
- All used machines are completely checked and tested.
- Most of the machines are being rebuilt with new spare parts and even a completely new control unit.
- You can benefit from a guaranteed and economic spare parts supply in the future.
